

Question & Answer

Q: *Don't most fuel systems provide complete information?*

A: Not at all! In fact many fail to capture all of the information needed on a consistent basis. Our system ensures that the data is consistent, and we flag drivers who refuse to cooperate and put in their odometer readings.

Q: *What if I want to track fueling events by job number or cost center?*

A: Our system is one of very few that permits additional data such as job number or profit center to be collected. With this information, we can save your controller extensive time at month-end reconciliation.

Q: *Quarterly and year-end tax reporting has always been a hassle. How can you help with this?*

A: Our system is one of a kind in that we are able to break out and report on all taxes paid. In fact, if you are a legitimate tax exempt customer, we can eliminate the hassle at the time of purchase by selling it tax free!

Accurate Information – Key to Fuel Management Program Success

LAS VEGAS, NV – Businesses trying to manage a fleet of vehicles are learning that not all fuel management systems are created equal. In fact, many lack critical information necessary for detecting slippage (abuse), accounting for taxes, and facilitating vehicle maintenance.

Thousands of businesses across the United States and Canada have learned to rely on the high quality fuel management services offered by River City Petroleum, Inc. and the CFN Fueling Network.

While River City's success can be attributed to their high-speed, high-control commercial fueling network, the key for many fleet managers is their fuel management reporting services.

“Without detailed transaction data for each fueling event, including time, date, product purchased, gallons, odometer, tax detail and other miscellaneous information, a fleet can not properly audit a vehicle or driver for discrepancies.

We place a high premium on ensuring that all of this information is available and properly presented in our fuel management reporting services,” according to Brad Folkins, River City's General Manager.

Fleet managers who use systems where this data is unreliable often find themselves spending valuable time back-filling their vehicle and driver data just to get a clear picture of what's going on. Most of the time, it's simply impossible to put the pieces together. “Drivers who are inclined to abuse your fuel management policies prefer systems that are incomplete,” says Brad. “If a driver refuses to enter accurate odometer readings at each fueling, you should take notice.”

Auditing a vehicle's MPG against their specifications is the most reliable way to detect abuse. Fleet managers on top of this issue agree on one thing: “If you lack the ability to calculate the MPG because the data is missing, then you have left the barn door open, and you really can not prevent a driver from misappropriating fuel from your system.”

River City Petroleum, Inc. provides their customers with comprehensive reports that allow a fleet manager to get a handle on their fuel consumption. “We help our clients formulate their fuel purchasing policies. Then we implement programs to ensure they can audit and enforce those policies, including periodic reviews of the reports,” Brad stated. Call today if you would like to get a handle on your fuel management system. There is still room for more customers within the River City Management System.

River City Petroleum, Inc. offers complete Fuel Management programs for fleets of all sizes. We are a participant of the CFN network, giving our customers access to over 3,000 highly controlled fueling locations nationwide. Call us today for a free Aggregate Fuel Cost Analysis to learn how we can help improve your bottom line.

Feature

Benefit

Secure Transactions

Total transaction security, including Personal Identification Number, helps eliminate abuse and slippage.

Purchase Controls & Limits

Ensures driver purchases only authorized products for the assigned vehicle, further reducing abuse and slippage.

Time & Date Restrictions

New Feature! Ensures driver access to fuel only when actively working for employer.

Daily Volume Limits

New Feature! Primary controls for ensuring drivers are unable to purchase more fuel in a single day than a given vehicle can consume.

Level 3 Data

All locations guarantee accurate level 3 data including odometer, gallons, price per gallon, tax breakout, time, date, and much more!

Exception Reporting

Reduces time spent auditing driver activity by quickly identifying abnormal fueling activity and bringing it to the fuel manager's attention.

Management Reports

Provides consolidated management information through a single source, saving fleet manager hours per month in auditing processes related to adding up and verifying driver receipts.

National Fueling Network

Provides drivers with the most consistent network of fueling locations nationwide, eliminating wasted time searching for diesel. All locations offer the very best in access and high-speed fueling.
